## EDUCATION

### University of Florida

Gainesville, FL | May 2028

B.S. Computer Science & Mathematics

- **Relevant Coursework:** Data Structures & Algorithms, Discrete Mathematics, Intro to Python, Object-Oriented Programming

## EXPERIENCE

### Incoming Google Student Ambassador

Aug. 2026 – Dec. 2026

Google

Gainesville, FL

- Selected to represent Google on campus, serving as a liaison between students and Google’s developer relations teams
- Organizing technical workshops and professional development events to foster student engagement with Google technologies

### Software Engineering Intern

May 2026 – Aug. 2026

NeuHawk Inc

Gainesville, FL

- Engineered a centralized **MERN stack** dashboard, containerized via **Docker** and deployed on **AWS EC2**, to automate manual data entry pipelines, **reducing** graduate onboarding time **by 45%**
- Engineered a profile and research discovery system with advanced filtering, **increasing** student-to-research matches by **60%**
- Set up a **Firebase** real-time retrieval system supporting **5,000+ concurrent queries**, automating research position matching

### Undergraduate Researcher

Jan. 2026 – May 2026

UF College of Electrical & Computer Engineering

Gainesville, FL

- Architected an **NLP** knowledge editing framework integrating **ICL**, achieving a **58% accuracy rate** for applying factual edits
- Replicated a validation system **computing vector distance** across Efficacy and Neighborhood metrics to quantify performance
- Fine-tuned **Llama-3.1 8B** via **PyTorch** and **QLoRA** on **21,900+ records**, improving recall and cross-domain generalization

## PROJECTS

### AI Code Visualizer | TypeScript, Next.js, WebAssembly (Pyodide), Zustand, D3.js, Gemini API

June 2026

- Engineered an interactive algorithm visualizer utilizing **Next.js** and **Monaco Editor**, rendering a low-latency IDE interface
- Engineered a reversible execution engine using **Zustand** to capture snapshots for sequential playback and **D3.js** visualizations
- Integrated the **Gemini API** to generate dynamic, context-aware explanations by injecting algorithmic snapshots into prompts

### Boat Club App | JavaScript, React Native, Firebase, WebSockets

May 2026

- Architected a cross-platform **React Native** application to unify member bookings and staff check-ins across iOS and Android
- Structured a **Firebase** backend using real-time **Firestore** listeners, ensuring seamless synchronization across mobile and web
- Integrated **Quo** and **Hapn GPS telemetry APIs** to consolidate tracking tools, cutting check-in times **by 50%**

### Fresh Meals 4 U | TypeScript, React, Tailwind, Express, Google Gemini API

Oct. 2025

- Developed a **full-stack** AI meal planner generating custom recipes from pantry items, **reducing planning time by 80%**
- Integrated **Gemini API** computer vision to parse user-uploaded pantry images, engineering robust prompt pipelines that generated dynamic meal suggestions and improved custom recipe generation accuracy by **35%** across 500+ edge cases
- Designed fallback logic to handle **LLM hallucinations and API rate limits**, ensuring **100% UI stability** and clear feedback

## LEADERSHIP

### Vice President

Jan. 2026 – Present

UF Society of Software Developers

- Delivered software engineering and internship strategy workshops to **2000+ students**, **boosting attendance by 41%**
- Streamlined operations by expanding executive board and **establishing 9 specialized leadership roles** to scale bandwidth
- Cultivated high-impact technical programming, from engineering lightning talks and interactive coding workshops for software engineering students to exclusive corporate recruiting events, driving **recurring member engagement up by 33%**
- Instituted project mentor framework matching students with professionals to bridge the gap between academic theory and practical software engineering applications, yielding **63% member increase** and **3 corporate partnerships**

## TECHNICAL SKILLS

**Languages:** Python, C++, JavaScript, TypeScript, SQL

**Frameworks & Libraries:** React, Express.js, PyTorch, NumPy, PyGame, STL (C++), OpenCV

**Infrastructure & Runtimes:** Linux/Unix, Docker, AWS (EC2, Lambda), Git, Node.js

**Concepts:** Machine Learning, Fullstack, Data Science, Software Engineering, Frontend, Backend, Databases
